Accessing HSEAS Samba from MacOS X

1) You need to be in MacOS’s “Finder” – the menus should look like this:

2) Click on “Go” to open a pull-down menu
3) Select “Connect to Server ...” and in the dialog box, enter the server name preceded by “smb://”, e.g., smb://natomabay.seas.rochester.edu and click on “Connect”

4) In the new dialog box, enter your HSEAS login name (the name filled in may be and is probably not your Hajim name) and your HSEAS Samba password, and click on “Connect”
5) In the menu box that opens, elect the file share you wish to access

6) You should now see the contents of the selected folder. This is now like any other folder on your computer
